Ícaro C. Capobianco

Software Engineer · Framework Author · React & TypeScript

São Paulo, Brazil (Remote) · asasvirtuais.dev@gmail.com · asasvirtuais.dev · linkedin.com/in/asasvirtuais · github.com/asasvirtuais

SUMMARY

I make codebases **agent-maintainable**. I created **asasvirtuais**, an open-source framework of architectural rules for React and TypeScript, and maintain **Guild RPG**, a live multiplayer AI platform that Claude Code built on it in about ten working days: 240 commits, 19 tables, zero lines changed by hand, and the architecture never broke. Before that, 7 years of remote work building production systems for US clients, including leading a PHP/jQuery to React/TypeScript migration. Top Rated on Upwork with 5,000+ tracked hours.

SOFTWARE I MAINTAIN

asasvirtuais — Open-source framework · Creator 2025 – Present

github.com/asasvirtuais/asasvirtuais-framework · published on npm

- One CRUD interface (`find`, `list`, `create`, `update`, `remove`) routed to one middleware per table, which holds every read rule, pre-flight check and side effect for that table.
- One zod schema per table that serves as the TypeScript type, the validation and the form fields; forms write into a shared in-memory index of rows, so the UI never holds stale copies.
- Pluggable backends: REST, IndexedDB (Dexie.js), in-memory, Airtable, Prisma. Ships an `AGENTS.md` that tells any coding agent where each piece of code goes.

Guild RPG — Multiplayer AI role-playing platform Oct 2026 – Present

guildrpg.vercel.app · case study at asasvirtuais.dev/guild-rpg

- Play-by-post RPG with an AI game master: guilds with 5 roles and per-guild permissions, AI-drafted characters and portraits, a card economy (store, orders, crafting, wallets), AI-narrated and illustrated missions, web push.
- Built by Claude Code from a written spec (`SPECS.md`, `PLAN.md`), directed from a phone: 240 commits in ~10 working days, 50 schema changes and 48 authorization changes, 0 lines edited by hand.
- Structural refactors (authorization into per-table middleware, server-side data fetching across every page, splitting the economy's core tables with a data migration) each landed in a day or less while features kept shipping.

EXPERIENCE

Senior Full-Stack Engineer · Startup Labs Jul 2026 – Present

- Full-stack architecture and development for early-stage B2B SaaS products in Next.js, React and TypeScript; established the architecture and API boundaries and built an operational ledger dashboard from scratch.

Freelance Full-Stack Engineer · Self-employed Jan 2024 – 2025

- **CertWorld**, online courses platform: sole engineer from spec to production. Lessons, exams, payments and authentication with Next.js, Airtable, Stripe and Auth0. Rated 5.0.
- 8 Upwork contracts (avg. 4.8/5): integrations, database apps and portals for US clients.

Web Developer · The Get Smart Group — US, Remote Feb 2020 – Jun 2023

- Led the frontend migration from PHP/jQuery to React and TypeScript.
- Built the **Latham Pools** lead-qualification tool (React, GraphQL, Airtable), live for one of the largest pool manufacturers in the US.
- Dozens of WordPress plugins, product configurators and POS integrations contributing to six-figure client revenue; automated deployment pipelines.

Developer Advocate · SDK Co — US, Remote Sep 2021 – Feb 2022

- Technical documentation, developer onboarding and blockchain integration research.

Web Developer · Expert Ready — US, Remote Mar 2019 – Feb 2020

- WordPress themes and PHP plugins with Bootstrap, jQuery and event sourcing.

SKILLS

Languages: TypeScript, JavaScript, Python, PHP
Frontend: React, Next.js, Mantine, Chakra UI, Tailwind CSS, Zod
Backend & data: Node.js, REST, GraphQL, PostgreSQL, MySQL, MongoDB, Firestore, Airtable, IndexedDB, Prisma, Stripe, Auth0
Agentic development: Claude Code, spec-driven development, agent instruction files (AGENTS.md), AI SDK integrations
Cloud: Vercel, AWS, GCP, Fly.io, Docker, Linux, Git, GitHub Actions
Independent study: Implemented the OPAQUE password-authenticated key exchange and OAuth 2.0 flows from scratch; functional programming in TypeScript; LLM fine-tuning.
Languages: Portuguese (native), English (fluent)
